

Tech Requirements

#1 – Sound:

Venue Provides:

- ☐ Provide a wireless headset microphone with fresh batteries
- ☐ Provide a Direct Input Box (DI Box) on stage for iPhone to be used on stage by Josh
- ☐ Provide 1/8 inch jack and cords to patch into DI box
- ☐ Provide gaff tape to secure iPhone to stage table and secure line across the floor
- ☐ Provide sound monitoring during the show

KidMin Science Provides:

- ☐ iPhone with playlist
- ☐ Josh has all necessary cords and adapters if needed (50 foot 1/8 inch cable, 1/4 inch to 1/8 adapter, 1/8 to 1/4 inch adapter, 1/8 inch to RCA, etc)

#2 – Lighting:

Venue Provides:

- ☐ Flood the stage with light
- ☐ Light the audience so that it is dimmed but faces can be seen
- ☐ At the end of the show, large jugs will be placed onto the table. The presenter will directly ask for the lights to be turned off. If possible, this needs to be a complete blackout. After this demonstration, the presenter will ask for the light to come back up to their original setting. (This does NOT happen when presenter flies in for events – can confirm onsite prior to show.)

#2 – Opening Video and Graphic

Venue:

- ☐ Provide a projector, computer and sound to play 29 minute countdown video and display graphic
 - [Link to 29-minute countdown video](#)
 - [Link to Amazing Chemistry Show logo for display](#)

#3 – Day of Show

Sound Check:

- ☐ Test iPhone, Mic and Cartoons 45-60 min prior to the start of the show

Order of Service:

1. Display “Chemistry Show Front” graphic
2. Start the 29 Minute countdown video 28 minutes before the official start time of the show (Example: Show starts at 6:30pm. Start video at 6:02pm)
3. Return screen to display “Chemistry Show Front” graphic for remainder of show
4. Show begins (Josh starts iPhone with background music and microphone is LIVE)

As organizations grow in technical capabilities and we adapt to new technology, we want to be clear about our video and streaming policy.

1. If your venue has the capability to project live video from the show, that's excellent! It can be a blessing to audience members to be able to see a large image on a side screen, especially in larger venues. I can talk with your tech team during our set up to cue them on special shots and tips for framing certain portions of the show.
2. If your organization offers live streaming, you may live stream our 1-hour event. However, we must insist that it is a **live stream only** and that you and your tech team can ensure that no video of our event will remain hosted on any streaming platform or your church's Web site, even under password protection, once the show ends. The Amazing Chemistry Show content is proprietary in that I do not want others to be able to mimic what I do and therefore undercut the way God provides for our family. I suppose this would be the same as a Christian comedian requiring all phones to be taken and stored prior to their show starting.

SPECIAL NOTE: While we don't allow sharing video of our live event in any capacity, it is a huge blessing to our ministry to be able to capture live video from different events. If you do offer a live stream option and you are able to **RECORD** the show, Josh will provide a jump drive to download the show recording at the end of the event that he can use for future promotional purposes.
